

Practical Round Question Sheet – Multi-Agent AI Chatbot (2 Hours)

Task: Build a minimal multi-agent chatbot where two AI agents respond to a user query.

Core Requirements

Backend (Django + DRF)

- Endpoint: `POST /api/chat/`
- Accepts a user query (`message` field)
- Run **two agents**:
- **Summarizer Agent** → use **Groq LLaMA** to summarize the query
- **Answer Agent** → use **Google Gemini** to answer the query
- Return both agent responses as JSON
- Save the query and responses in the database

Sample Response:

```
{
  "user_message": "Tell me about Django",
  "agents": {
    "summarizer": "This is a request for a summary about Django.",
    "answer": "Django is a Python web framework for rapid web development."
  }
}
```

Models

- **Chat:** user_message, timestamp
- **AgentResponse:** chat (FK), agent_name, response

Frontend (Minimal)

- Input box for query
- Submit button
- Show agent responses

Database

- Use SQLite or Postgres
-

Optional (Not Required)

- User login & registration
- Separate chat history per user
